

DL 2101TFGW – FIRE AND INTRUDER ALARM SYSTEM WIRELESS

This system studies the topics related with a complete installation of a fire and intruder alarm wireless system in the electrical civil installation. It has a modular structure and it consists of didactic panels installed on a vertical frame.

The modularity of this didactic system grants to the students a direct and immediate approach to the topics, offering the opportunity to study various subjects performing several experiments. In this section the following devices are studied:

- smoke sensor,
- thermal detector,
- gas detector,
- emergency pushbutton,
- alarms,
- auxiliary battery
- control panel.
