

The equipment is designed to operate on hydraulic bench. The installation is mounted on a frame constructed of aluminum, with a system of pipes and valves that allow it to be coupled hydraulic pump and bank equipment in series or in parallel.

The equipment has a frequency converter for controlling the speed of rotation of the pump. Also has two wattmeter for obtaining the power consumed by both pumps.

Through the study of the characteristics of centrifugal pumps is demonstrated the operation and functioning and factors affecting their efficiency.

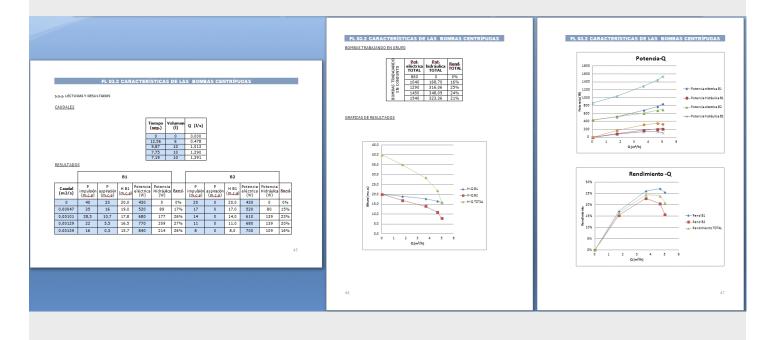

The manual shows clearly and with a lot of images, the hole process to operate the equipment.

The instruction manual explains and shows all the theoretical foundations, as well as all the mathematic expressions used during the experimentation.

# PRACTICES EXECUTABLE

• Bringing on stream of a bomb, analysis and study of the aspects to <u>Inside diameters:</u> consider.

- Priming the pump.
- Checking the sense of rotation.
- Overcurrent produced in the motor.
- Study and obtaining the characteristic curves of a pump.
  - Height flow (H F).
  - Power Flow (P-F).
  - Efficiency Flow (η-F).
- Study of the cavitation, and obtaining the NPSH curve required-flow.
- Study of the different forms of regulation of turbo pump.
- Variation of the rotation speed. Getting new characteristic curves.

 Modification of the operation point by variation of the pumping station.

- Maneuvered in an the impulsion valve.
- Analysis of identical pumps that operate in identical group.
- Operating characteristic curves in series.
  - Height-discharge (H-F).
  - Power-flow (P-F).
  - Efficiency-caudal (η-F).

• Operating characteristic curves in parallel.

- Height flow (H-F).
- Power-flow (P-F).
- Efficiency flow ( $\eta$ -F).
- Analysis of different pumps operate in group.

• Operating characteristic curves in series.

- Height flow (H-F).
- Power-flow (P-F).
- Efficiency-caudal (η-F).

• Operating characteristic curves in parallel.

- Height flow (H-F).
- Power-flow (P-F).
- Efficiency-caudal (η-F).

## TECHNICAL DATA

- . Suction pipe:
  - . Øin = 27,2 mm.
  - . Øext = 27,2 mm.
- . Impulsion pipe.
  - . Øin = 34 mm. . Øext = 40 mm.

### Manometros:

- Bourdon type with glycerin of -10,33+35 m.w.c.(x3).
- Bourdon type with glycerin of -10,33+70 m.w.c.

#### Characteristics of the pump:

- . Pump head maximum 23 m.w.c.
- . Flow 20 / 160 l / min.
- . W 21 / 10 m.w.c.
- . W max. 23 m.w.c. . W min. 10 m.w.c.
- . Power consumed 750 W (1 HP).
- . Rotational speed 2.900 r.p.m.

#### Indicadores de potencia:

• Wattmeters of scale 0-1200 W.

## **REQUIREMENTS**

Hydraulic Bench FL 01.4

Electrical Plug-in: 230V/50Hz.
