

VIRTUAL INDUS

Refrigerant Accreditation

virtual-indus.mimbus.com

VIRTUAL INDUS Refrigerant Accreditation reproduces a virtual room in which the trainee can practice handling of refrigerant fluids / refrigerant accreditation while respecting applicable environmental rules and processes. The system also provides you with all the follow-up and tools to track your trainees' progression, evaluate their activity and test their skills

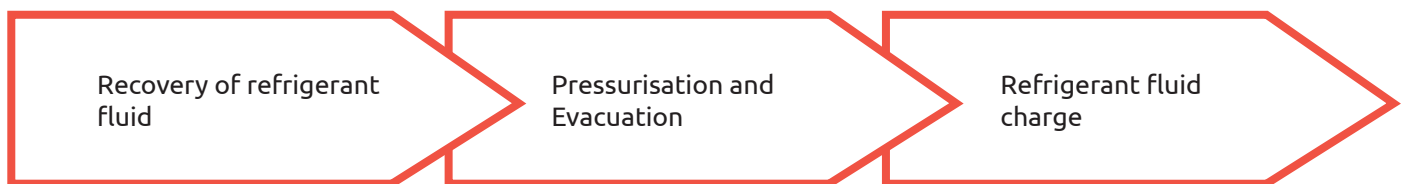

BENEFITS

- Increase your trainee's practice time
- Reduce the risk of accidents
- Increase the attractiveness of your training program
- Improve trainee or employee performances
- Increase your training attractivity with a playful solution
- Evaluate your trainees' competencies in real-time

LEARNING STEP BY STEP

VIRTUAL INDUS Refrigerant Accreditation prepares your trainees to properly handle refrigerant fluids. The module is composed of three learning phases.

To produce real working conditions, the trainee can do the exercises in free mode if they respect the required procedures.

AN EFFICIENT FOLLOW-UP OF YOUR TRAINEES' LEARNING

Before each exercise, the trainee chooses a level of difficulty that determines the guidance conditions: the higher the level, the more autonomous the trainee must be in the tasks' execution. Once the exercise is completed, the intelligent management system embedded in VIRTUAL INDUS Refrigerant Accreditation provides you with a performance report based on:

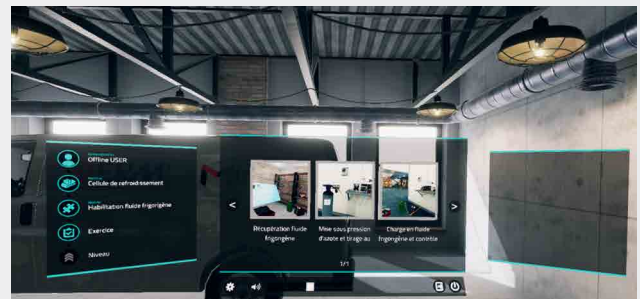

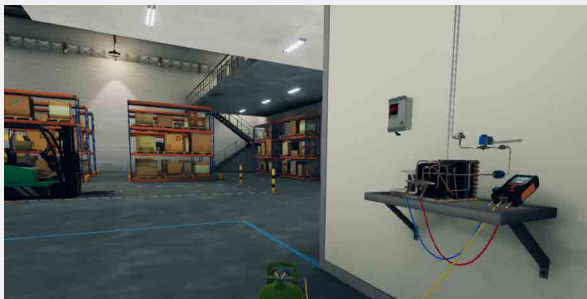

- ▶ Exercise execution time
- ▶ Safety instruction compliance
- ▶ Equipment choice relevance
- ▶ Trainee autonomy

VIRTUAL INDUS Refrigerant Accreditation is embedded with a unique system that controls and tracks the acquisition of trainees' competencies in real-time. Instructors can create user profiles, groups, learning paths and exercises. Trainees then work through the elements that have been defined for them.

TECHNICAL CARD

HARDWARE	
PC	Labeled VR Ready
Immersive 3D headset	HTC Vive + 2 joysticks 3D Vive + Sensors
Min. floor space	6m ²
SOFTWARE	
Features	User identification Work machine selection Work module selection Exercise difficulty level selection Exercise completion
Trainee's follow-up with VULCAN®	Exercise completion Results analysis Results recording Activity tracking Creation of learning paths and exercises Validation of trainees' competency acquisition
Available languages	French, English (others on demand)

VIRTUAL INDUS Refrigerant Accreditation is a set of exercises available in MIMBUS' Virtual Workshop. Composed of several modules, this virtual room allows users to experience several trades. Easily customizable, trainees can swap from one workshop to the next making training more productive and flexible.
